Our spring calving heifers and cows have relocated to Central Texas. The pairs, as well as heifers and bulls on test in the Rio Grande Valley Beef Improvement Bull Test and Heifer Development Program will remain in the Valley until late this spring. We are very pleased with the progeny sired by our 3/4 SM 1/4 AR bull and intend to continue with that part of our breeding program to inject some desirable carcass and color traits while maintaining heat tolerance in the replacement heifers and herd bull prospects that we produce.
