

# Simbrah

## The First SimGenetic Hybrid

The one that can take the  
heat, humidity, insects,  
and also perform!

*In addition to being adaptable  
to the heat and thriving in  
the cold, Simbrah cattle perform  
well in the feedlot.*

After many years of retaining ownership in our cattle through the feedlot and receiving carcass data on those cattle, we know Simbrah cattle can feed well and make money. Recent data on a group of our Purebred Simbrah and Simbrah x SimAngus steers and feeder heifers show over 80% choice with an average yield grade of 2.4. We concentrate on producing cattle that contribute positive traits to the beef industry and we do it with Simbrah cattle that thrive in our environment.

Consider adding *Simbrah* if  
the cattle in your program  
*can't take the heat!*

Selling Purebred & Composite Simbrah
